Professional Summary

Python Backend Developer with experience developing secure, scalable, and maintainable web applications using Django and Django REST Framework. Proficient in REST API development, JWT authentication, PostgreSQL, database modeling, query optimization, and backend system design. Demonstrated ability to build production-ready applications through projects involving multi-role authentication, API-driven architecture, and machine learning integration. Strong foundation in object-oriented programming, data structures, algorithms, and software development lifecycle. Seeking an opportunity to apply backend development skills and contribute to high-impact engineering projects.

Education

M.S. Ramaiah University of Applied Sciences Jan 2022 – Jun 2024
B.Tech in Computer Science and Engineering
CGPA: 7.05 / 10

Projects

Enterprise Hospital Management System Jul 2026 – Present

Python, Django, Django REST Framework, Next.js, TypeScript, PostgreSQL, Redis, Celery, JWT Authentication, Tailwind CSS

- Architected a multi-tenant Hospital Management System using Django REST Framework and Next.js 15 with RBAC (9 roles), JWT authentication, refresh-token rotation, and two-factor authentication.
- Built hospital, branch, department, patient, doctor scheduling, and appointment modules with race-safe slot allocation using a service-layer architecture, backed by 75+ pytest tests for RBAC and tenant isolation.
- Integrated Celery and Redis for asynchronous OTP/email notifications, and developed a responsive TypeScript frontend with React Query, Zustand, and Zod, leveraging AI-assisted development to accelerate implementation and debugging.

Book My Advocate – Legal Consultation Platform Jan 2026 – Jun 2026

Python, Django, Django REST Framework, REST APIs, JWT Authentication, PostgreSQL, Redis, Celery, Git, Postman

- Developed a scalable backend for a legal consultation platform using Django, Django REST Framework, and PostgreSQL, designing modular applications and secure RESTful APIs for client, advocate, and administrator workflows.
- Implemented JWT Authentication, Role-Based Access Control (RBAC), API validation, search, filtering, and optimized PostgreSQL queries to deliver secure, efficient, and maintainable backend services.
- Integrated Redis and Celery for asynchronous background task processing, enabling email notifications, appointment reminders, and scheduled jobs without impacting API response times.

Technical Skills

Languages: Python, SQL
Frameworks: Django, Django REST Framework, REST APIs
Databases: PostgreSQL, SQLite, Django ORM
Tools: Git, GitHub, Postman, VS Code
Backend: JWT Authentication, Role-Based Access Control (RBAC), API Development, API Versioning, Database Design
Testing & Docs: Pytest, Swagger/OpenAPI (basic)
ML Libraries: TensorFlow, OpenCV, Scikit-learn, NumPy
Concepts: OOP, MVT Architecture, Modular Design, Data Structures, Algorithms, RESTful Design Principles
AI Coding Assistants: GitHub Copilot, ChatGPT, Claude, Cursor AI, Windsurf

Publications & Achievements

Python Full Stack Development – PySpiders, Bengaluru: Trained in Python, Django, REST APIs, SQL, HTML, CSS, JavaScript, and full-stack web development. Jan 2025

Research Publication – IJIRE: Arecanut Status Detection Using Deep Learning, International Journal of Innovative Research in Advanced Engineering. May 2024

Hackathon Achievement – Ramaiah University: Developed Intelligent Chess Coaching System, presented at IIC Ramaiah University Hackathon. Nov 2023
